一、实验目的

SQLite 数据存储^Q和访问。

实验内容

将班级名单以SQLite的方式保存在本地

- 1. 每个列表项包含: 学号和姓名, 电话;
- 2. 可以删除列表项,添加列表项(数据更新到SQLite数据库Q);
- 3. 可以读取联系人(使用内容提供者),将联系人的名字和电话号码读入到名单列表并插入数据库;
- 4. 支持在新的页面中学号和姓名, 电话。
- 三、具体实现

MainActivity

内容来源:csdn.net

```
import android.os.Bundle;
import androidx.appcompat.app.AppCompatActivity;
import androidx.fragment.app.Fragment;
import androidx.fragment.app.FragmentManager;
public class MainActivity extends AppCompatActivity {
   @Override
    protected void onCreate(Bundle savedInstanceState) {
       super.onCreate(savedInstanceState)
       setContentView(R.layout.activity_main);
       FragmentManager fm = getSupportFragmentManager();
       Fragment fragment = fm.findFragmentById(R.id.fragment_list);
       if (fragment == null) {
            fragment = new FragmentList();
            fm.beginTransaction()
                    .add(R.id.fragment_list, fragment)
                    .commit();
                                                             CSDN @Atidote[]
```

FragmentList
